

1521 BlackLine Paper

Our unique sensitized coatings produce dark, crisp line colors. Azon's reputation for consistent speed, line color, and curl properties has earned us the title of "Industry Leader." 1521 BlackLine Paper is considered speed 8.

Physical Properties

Weight	20lb / 75gsm
Caliper	.004"
Speed Rating	176

Features & Benefits

Speed & Efficiency Clean, dry, positive prints of anything drawn, typed, written or printed on translucent material in just seconds.

Ease Of Use Processing requires no special skill or training to achieve satisfactory results. Impossible to over-develop or improperly fix the diazo image.

Economical Diazo opaque papers have the lowest cost per unit of any copying material.

Market Applications

- Reproduction Prints
- Mapping
- Working Drawings
- Production Prints
- Screen Printing
- Microfilming

Usage Guidelines

Speed Rating The speed rating listed above does not pertain to machine speed setting. The rating is based on an arbitrary speed scale: no light sensitivity has a rating of 0 and a medium speed paper has a rating of 100.

Operating Conditions 1521 BlackLine works best in controlled operating conditions. Recommended operating conditions are: Relative Humidity...20-50% and Temperature...65-75°F.

Storage Conditions Always store 1521 BlackLine in a cool dry area. It is best to keep storage conditions within the same guidelines as "Operating Conditions" stated above. Diazo media has a "shelf life." The cooler you maintain the storage facility, the more extended the shelf life will become. Always reseal partially used packages of rolls. Never store diazo near ammonia fumes or direct light. Stock should always be rotated to ensure that oldest stock is used first.

Azon Diazo Satisfaction Guarantee

Azon Diazo Reproduction Media is designed for use in ammonia developing diazo machines. We guarantee that you will be completely satisfied with the performance of Azon Diazo Media products, or return them to Intelicoat for full product exchange or refund.
